PARTNER: Amos Family Funeral Home
PROJECT TYPE: Audio/Video System

WHO THEY ARE:

Amos is one of the most successful funeral homes serving the greater Kansas City area.

WHAT WERE THEIR GOALS?

- A high-quality audio/video system with full connectivity between 3 chapels.
- Compatibility with any media provided by families: DVD, VCR, digital files on a laptop, etc.
- Central monitoring station to eliminate distractions during services.
- Live video/audio can be viewed in the other chapels for overflow purposes.
- Video/audio could be recorded onto DVD or stored/streamed over the internet.

HOW SOUND PRODUCTS HELPED:

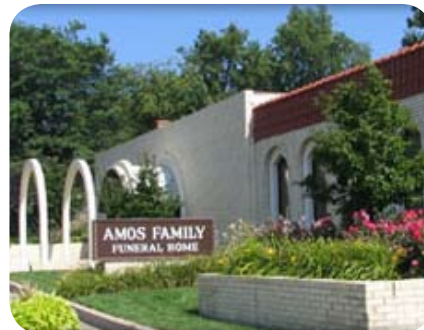

Sound Products not only created a system to meet Amos' requests, our team installed a user-friendly, computerized system to control all functionality. Complicated commands are shown as simple buttons on a computer screen, and controlled with a single click of a mouse.

WHY THEY CHOSE SOUND PRODUCTS:

Amos liked how Sound Products really listened to their goals and went well beyond order taking.

WHERE THE DESIGN MADE A DIFFERENCE:

The Amos staff can now easily monitor services even when all 3 chapels are being used at the same time. The added audio/video environment enhances the experience of Amos clients during a very emotional time.

Since 1946, Amos has been known for creating meaningful services for the loved ones. They wanted an audio/video system to enhance this feeling.

The audio/video system can be controlled from a discreet location so services do not have to be interrupted.
